

Active Ingredient: **Mesotrione**

Pre- and Post-Emergence Weed Control

## SLIPSTREAM™ HERBICIDE

### Formulation: Liquid Concentrate

#### Group 27 Herbicide

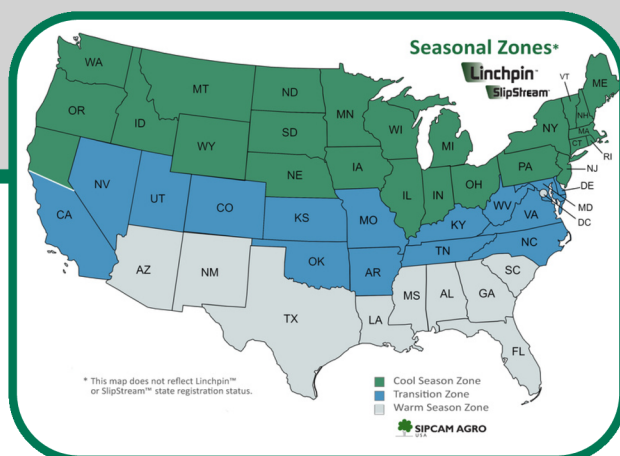

SlipStream™ is an effective, broad-spectrum herbicide that controls crabgrass, ground ivy, yellow foxtail, yellow nutsedge and nimblewill. It offers effective pre- and post-emergent control of dozens of broadleaf weed and grass species as the active ingredient mesotrione allows the product to inhibit photosynthesis in susceptible plant species as it is absorbed by plants through roots, shoots and leaves, and distributed throughout the plant.

### Key Benefits of SlipStream™

- Can selectively control perennial bentgrass, nimblewill and annuals such as crabgrass, goosegrass and many labeled turfgrass species.
- SlipStream™ can be applied at seeding to prevent weed germination and allow the turfgrass species to establish without weed competition.
- Selectively controls bentgrass within Kentucky bluegrass, perennial ryegrass, and tall fescue.
- Safely add an additional 4 oz per acre of Slipstream , with the Linchpin™ herbicide program to gain greater control of difficult weeds like nimblewill and larger crabgrasses.

### A Healthy Partnership

SlipStream™ herbicide is a valued partner ingredient to be used in conjunction with Sipcam's [Linchpin™ herbicide](#). Linchpin is ideal for control of key weeds like sedges, crabgrass and broadleaf weeds. With the active ingredients (AI) halosulfuron, quinclorac and mesotrione, Linchpin's patented formula greatly reduces or eliminates the risk of bleached turf from mesotrione and it's the only mesotrione-containing product labeled for use on Bermudagrass. The patented Linchpin formulation allows an additional 4 oz per acre of Slipstream™ to be safely added to the Linchpin program for greater control of nimblewill and larger crabgrass.

## Superior Weed Control and Flexibility

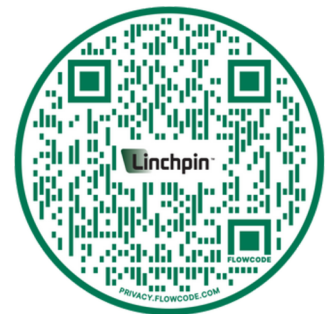

Nimblewill is a weed that normally requires two separate applications to achieve full control. In recent trials, a sequential program of Linchpin™ tank-mixed with an additional 4 oz of **SlipStream™** mesotrione performed comparable to a sequential 8 oz mesotrione program for control of nimblewill. And a single application of Linchpin™ with the additional 4 oz of Slipstream™ outperformed the industry standards for kyllinga and large crabgrass control. The flexible Linchpin™ program provides unparalleled weed control for some of the most difficult to control weeds, without the usual turf bleaching effect.

### Key Weed Performance Against the Competition

	Sedges		Crabgrass		Broadleaf Weeds			
	Kyllinga	Nutsedge	Smooth Crabgrass	Dutch Clover	White Clover	Dandelion	Nimblewill	Linchpin™ on Nimblewill w/ 4 oz. SlipStream™
