# CAL-Amino SEA

Highly available plant active calcium formulation with seaweed

<b>Calcium</b>	<b>4.8%</b>
<b>Amino Acids and Peptides</b>	<b>10%</b>
<b>Organic Nitrogen</b>	<b>1.6%</b>
<b>Boron</b>	<b>0.16%</b>
<b>Seaweed (Tasmanian Bull Kelp)</b>	<b>20.0%</b>

The inbuilt amino acid content of CAL-Amino SEA acts as a chelating agent with the calcium, which makes it highly available to the plant. Therefore the rates of CAL-Amino SEA are much lower than with standard formulations.

Plants see this product as being a natural source of Calcium. The amino acids readily transport the calcium in the phloem directly into the cells.

The naturally occurring auxins, cytokinins and betaine hormones found in Tasmanian bull kelp help to reduce plant stress and promote flowering.

CAL-Amino SEA has the additional benefit of Tasmanian seaweed.

## DIRECTIONS FOR USE

CROP	RATE	COMMENTS
<b>TREES</b> (excluding stonefruit), <b>NUTS, BERRIES AND VINES</b>	<b>Foliar</b> 0.5 to 0.75 L /100L water Fertigation 4 - 6L/ha.	Apply in a water volume of 400L to 1000L per ha. Apply at regular intervals of 7-14 days from petal fall up until harvest.
<b>VEGETABLES</b> Cucurbits Fruiting Vegetables Potatoes	<b>Foliar &amp; Fertigation</b> 4 - 6 L /ha.	Apply in a water volume of 300 to 500L/ha. Apply from flowering up until harvest.
<b>CAUTION:</b> Do not apply as a foliar application in conjunction with copper fungicides. As CAL-Amino SEA contains a strong chelating agent, it will increase the activity of copper and levels of resulting phytotoxicity may not be acceptable to growers. For most effective results spray early morning or late afternoon.		

## FIRST AID

If poisoning occurs contact a doctor or Poisons Information Centre on 13 11 26.

## SAFETY DATA SHEET

For further information refer to the Safety Data Sheet (SDS) which is available from the supplier or from our website [www.sipcam.com.au](http://www.sipcam.com.au)
